Motivation for Purchasing New Small Sack Bags

Requesters have strongly recommended the procurement of new small sack bags instead of the used ones currently in use. The new bags are safer and more durable, with each bag lasting for more than a day under tunnel working conditions. During a recent mine walk-down, it was noted that some of the used sacks might have previously contained factory raw materials with unpleasant odors and potential health risks to users. Switching to new bags will therefore enhance safety, hygiene, and overall working conditions. Additionally, due to their durability, new bags are expected to reduce the frequency of purchases, leading to potential cost savings over a six-month period.
